

## Control Systems

Hargrove Gas Logs can be controlled in variety of different ways. Various control methods include match light, manual safety pilot control, on/off and variable flame remote controls.

### Match Light Valve Kits

Manual valve that allows you to light the main burner with a match and a turn of a knob. Match light can only be done with natural gas and you must check local codes to ensure that match light gas logs are allowed in your area.

### Manual Safety Pilot

Standing pilot safety valve system that allows you to ignite the main burner flame with the turn of a knob.

### On/Off Remote Safety Pilot

Standing pilot safety valve system that allows you to ignite the main burner flame with a remote control or other switching system.

### Variable Remote Safety Pilot

Standing pilot safety valve system that allows you to ignite the main burner flame with a variable remote control or other switching system.
